

# Needle Exchange Directory

The purpose of needle exchanges is to reduce drug related harm and prevent transmission of blood borne viruses. If you use clean and sterile equipment, and do not share with others, you can greatly reduce your chances of becoming infected with Hepatitis C or HIV.

By disposing of your used equipment safely at an exchange you are helping to reduce risks for others who may come into contact with discarded equipment.

## 24Hr Emergency Exchange

Please be aware that A&E based exchange services will be offered to you, but you may have to wait as other patients will take priority if their treatment needs are more urgent.
